i forgot my password in mysql workbench whatshould i do now

No problem, Master 😄 This happens a lot with MySQL Workbench.

First understand one thing: **MySQL Workbench does NOT store your password**. The password belongs to the **MySQL server user (usually `root`)**. So if you forgot it, you must **reset the MySQL root password**.

I'll show you the **simplest method for Windows**.

Method 1 — Reset MySQL Root Password (Recommended)

1️⃣ Stop MySQL Server

Press **Windows + R** → type:

```
services.msc
```

Find:

```
MySQL80
```

Right click → **Stop**

2️⃣ Open Command Prompt as Administrator

Search **cmd** → **Run as administrator**

Go to MySQL bin folder:

Example path:

```
cd "C:\Program Files\MySQL\MySQL Server 8.0\bin"
```

3️⃣ Start MySQL without password

Run this:

```
mysqld --skip-grant-tables
```

⚠️ Keep this window **open**.

4️⃣ Open another CMD window

Run:

```
mysql -u root
```

Now you will enter MySQL **without password**.

5️⃣ Change password

Run:

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'NewPassword123';
FLUSH PRIVILEGES;
```

Example:

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'root123';
```

6️⃣ Restart MySQL

Close both CMD windows.

Go again to **services.msc**

Start:

```
MySQL80
```

7️⃣ Login in MySQL Workbench

Use:

```
username : root
password : NewPassword123
```

Alternative (Very Easy Way)

If you are **not worried about losing databases**, you can simply:

1. Uninstall **MySQL Server**
2. Reinstall MySQL
3. Set **new root password**

This takes **5 minutes**.

Pro Tip (To avoid this again)

In MySQL Workbench:

```
Connection → Store password in vault
```

So it remembers your password.
